

Wireframes

These wireframes represent the 10" touchscreens that are provided for the backseat passengers in a Range Rover. They are loosely based off the graphics that they already have. However, I have made some of them a bit more creative since the passenger will be using mid-air gestures and needs clear and obvious feedback whereas previously, the selections would be done using touch. This meant that they just selected whatever they wanted. These wireframes were created using balsamiq.

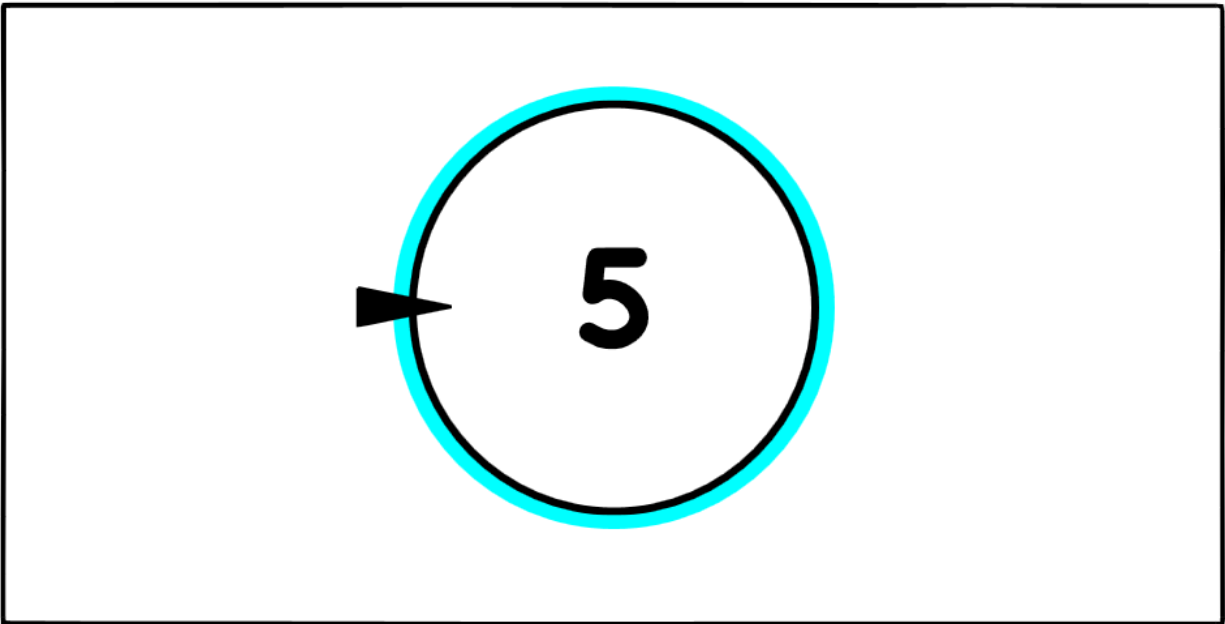

Ambient Lighting

The ambient lighting screen will display the current colour as the main body of the screen. It will also show the options of colours down the bottom so that it helps the passengers decide which direction they would like to swipe. Furthermore, at the top of the screen there is a slider to adjust the brightness. When the passenger swipes up, the circle will move further along and vice versa.

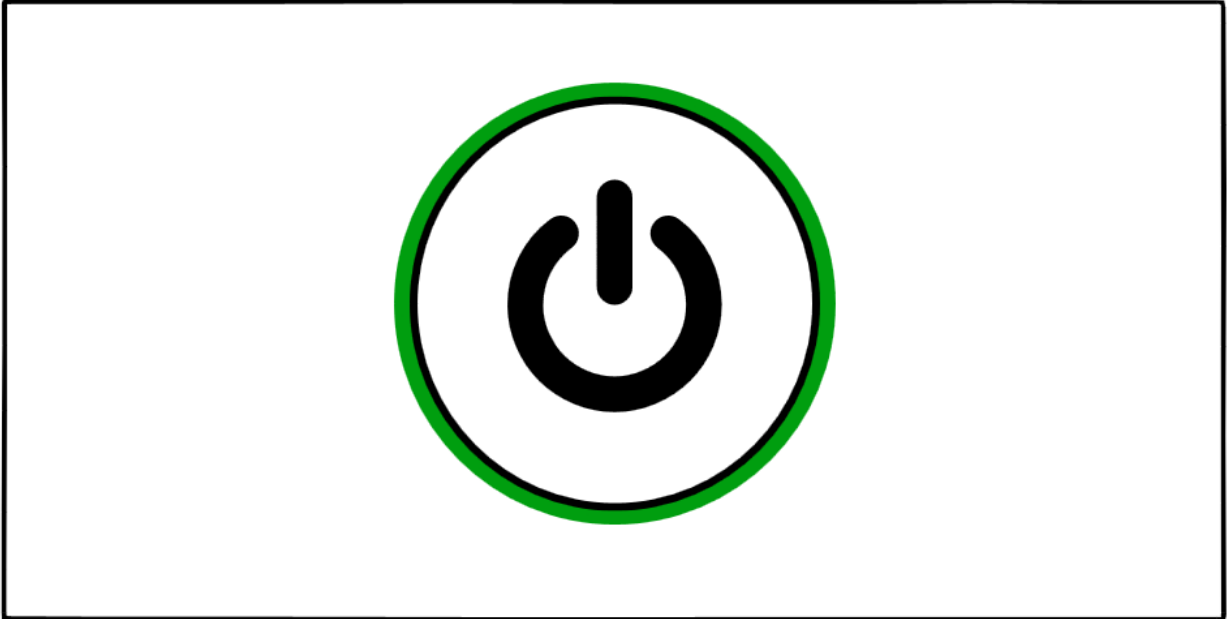

Adjust Temperature

This is the dial to represent the temperature changing. Around the dial will glow blue for when there is cold air and red when its hot. The triangle will move around the dial accordingly.

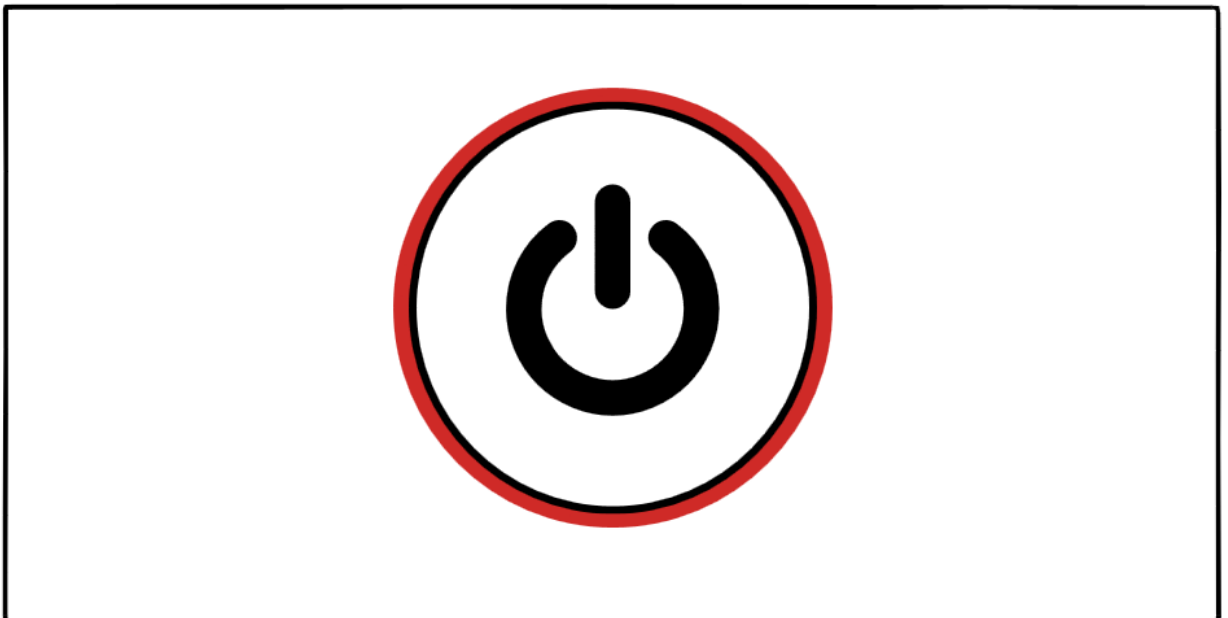

Massage Chair On

A power button symbol will glow green to signify the massage chair has turned on.

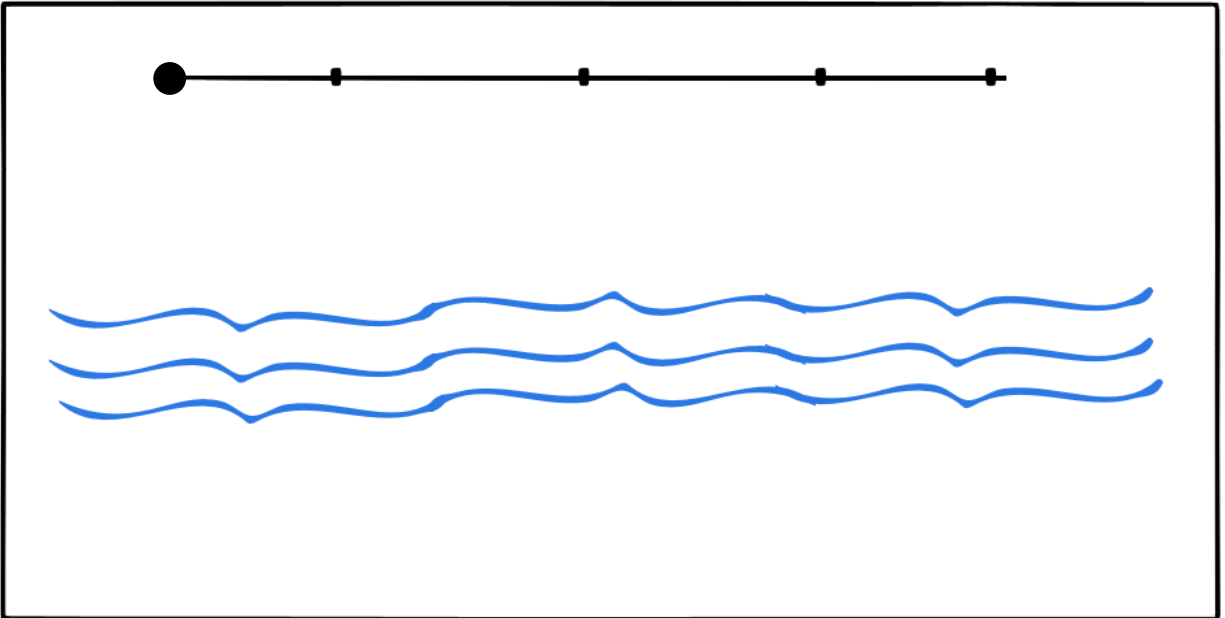

Massage Chair off

A power button symbol will glow red to signify the massage chair has turned off.

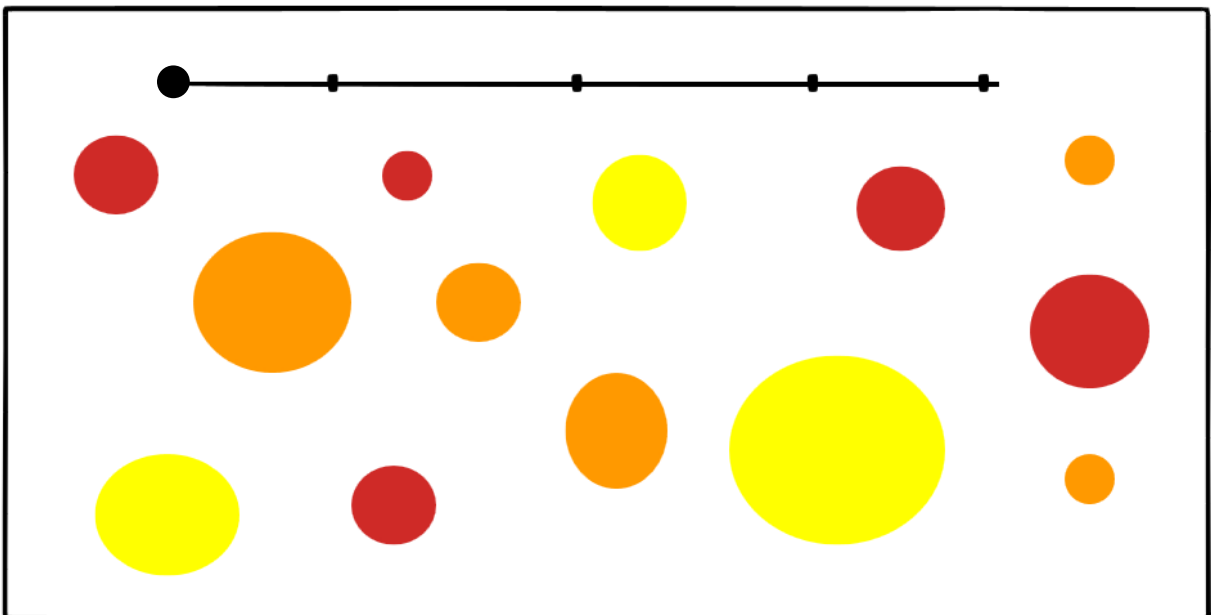

Wave Format

For the wave format, there will be wavy lines going across the screen. There is also a slider which will show the intensity level

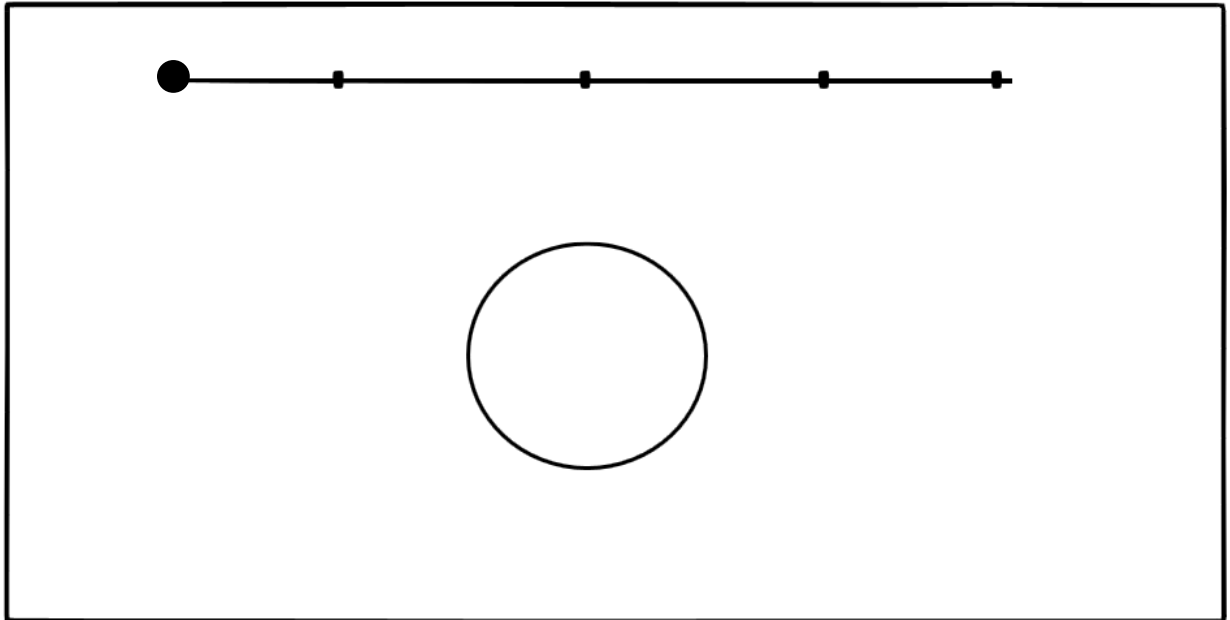

Hot Stone Format

For hot stone, there will be “warm coloured” balls moving around the screen to represent hot stones.

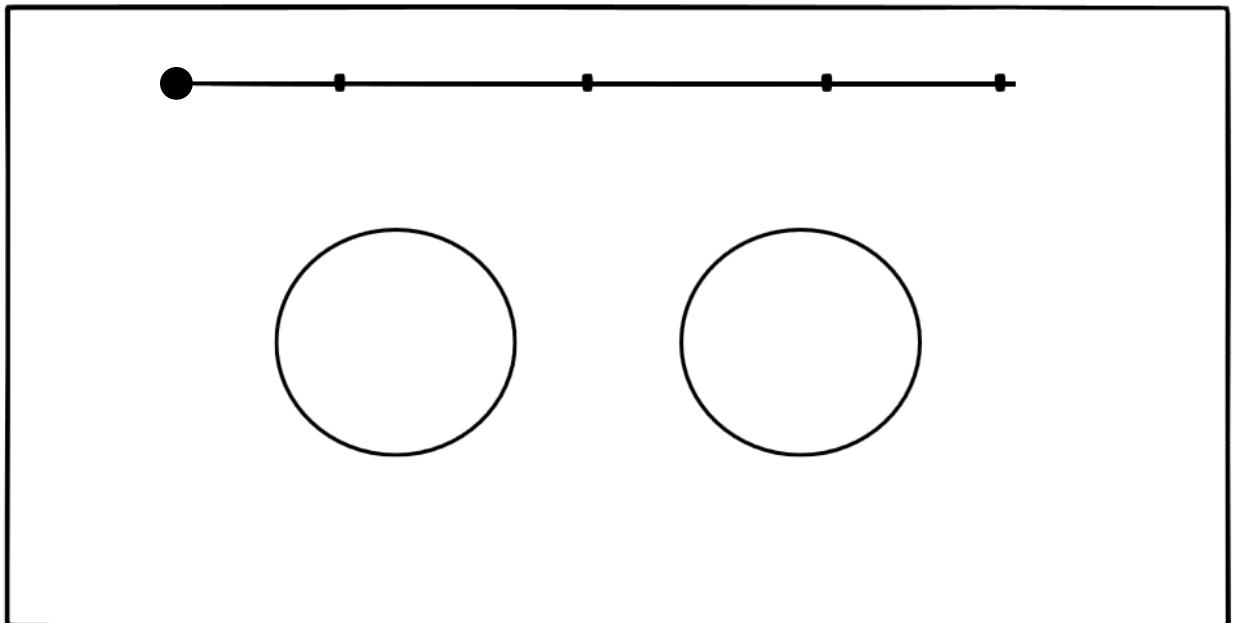

Pulse Format

The circle in the middle will grow larger and smaller to represent pulse

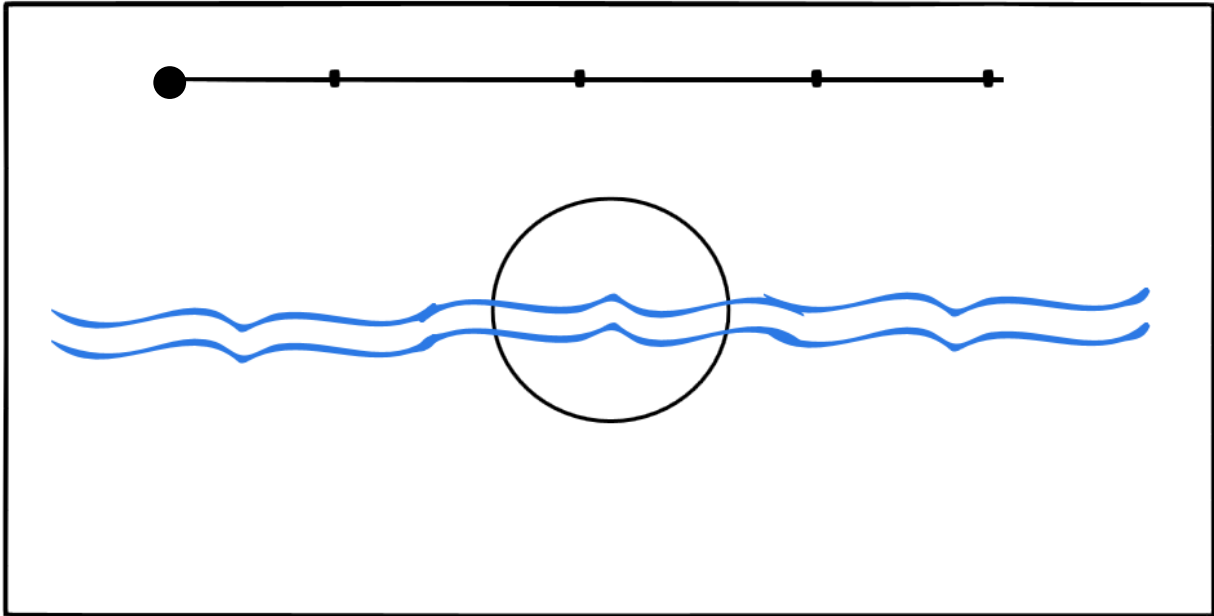

Pulse Duo

Instead of one ball pulsing there will be two

Combination

Combination will be represented by wave and pulse being shown together

Open Champagne Cooler:

When the champagne cooler is opened it will look as though there is fizz coming out of the glass and stars surrounding it – as though a celebration.
