

Information Sheet

The aim of this experiment is to learn about what gestures people will associate with different actions in a car if there was a sensor in the centre console of the back seat.

The survey will take roughly 30 minutes to complete.

Firstly, the format of the survey will be explained, and you will be asked to position your camera so that your hand is visible. You will then be asked a series of questions asking you to do some gestures that you deem appropriate to the action you will be asked about.

Your gestures will be recorded over zoom to be reviewed later. All results will be kept private. However, no personal data will be stored and if you wish to drop out then all data recorded will be discarded.

If you have any further questions about the survey, please contact:

Catriona Murphy
